

Many locations. **One you.**

Discover how to do more
in less time while driving
resiliency across edge sites

Powering Business Worldwide

Gain visibility into critical assets across tens, hundreds or thousands of locations

Managing and monitoring IT infrastructure equipment like power distribution units (PDUs) and uninterruptible power supplies (UPSs) across multiple sites is time consuming—and often stressful.

When essential equipment unexpectedly goes down at a remote site, such as a retail store, medical clinic or school, you need to quickly fix the problem to minimize the impact to your organization's bottom line and reputation. That's exactly what Brightlayer Distributed IT (DIT) software enables you to do.

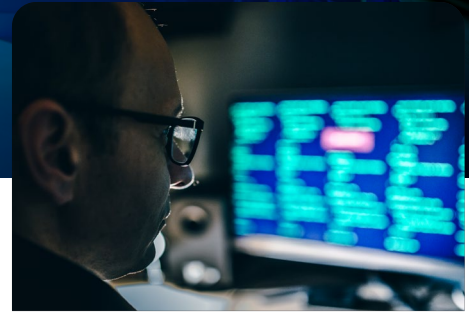

Manage and optimize performance

View real-time reports, trend charts and dashboards, and receive real-time alerts prioritized by severity and escalated when needed.

Resolve issues and avoid disaster

Remotely control assets, such PDU outlets and UPS load segments, automate device response and diagnose equipment performance.

Keep your sites cybersecurity

Push remote firmware updates to improve cybersecurity and eliminate in-person visits.

Efficiency

Improve troubleshooting and staff productivity across edge locations.

Resiliency

Prevent downtime with remote monitoring and control of assets.

Sustainability

Gain insights into energy efficiency and execute plans to lower consumption.

Safety & security

Push remote firmware updates to improve cybersecurity.

Manage and optimize the performance of distributed IT equipment

Brightlayer DIT software allows you to remotely manage and control network connected devices—regardless of the vendor or location. It provides full visibility into your assets, and enables you to quickly troubleshoot and resolve issues, improving overall productivity and resiliency.

View real-time reports, trend charts and dashboards for micro and macro trends at one or multiple locations.

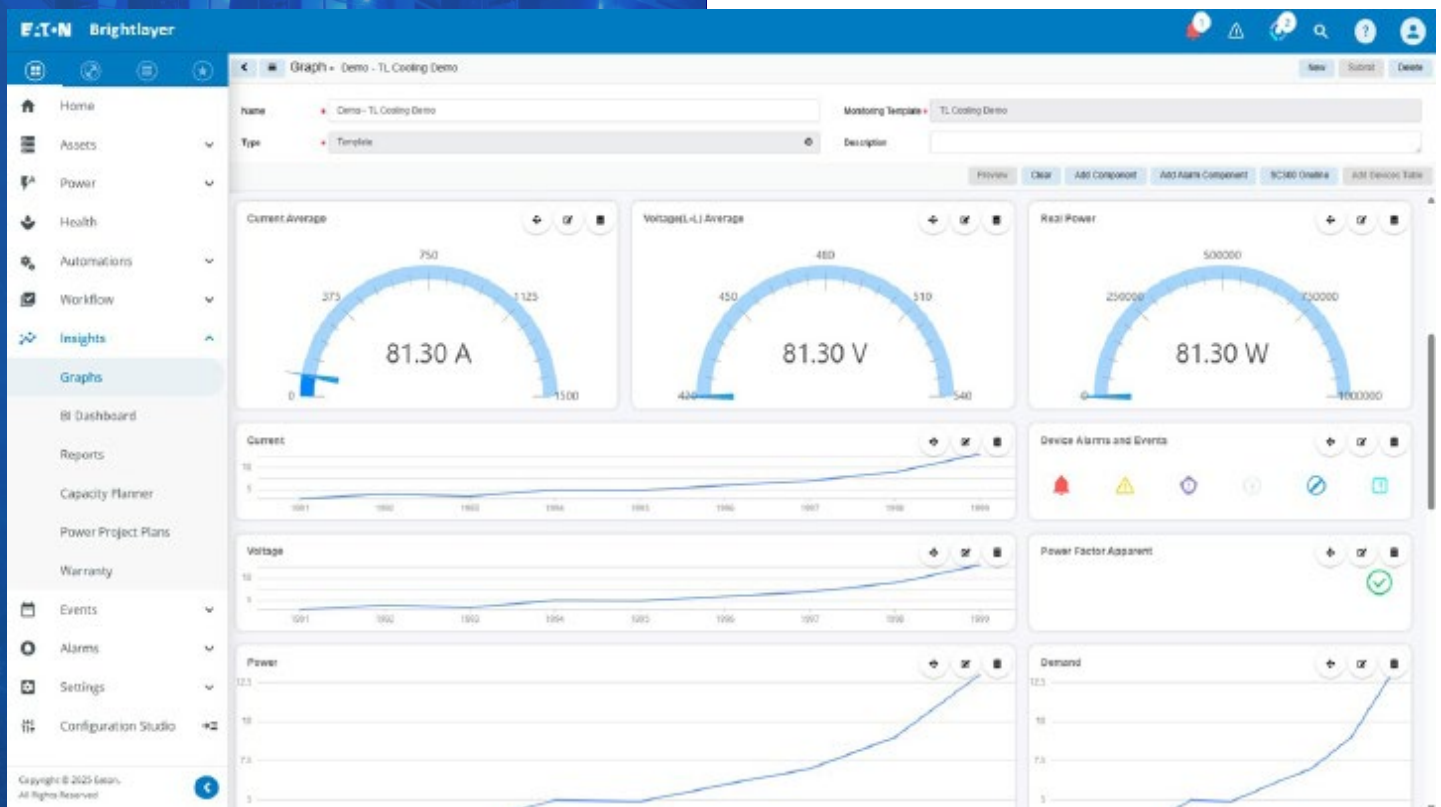

Eliminate nuisance alarms with real-time alerts for critical issues that demand a fast response.

Understand UPS/PDU performance and lifecycle management so you can more effectively manage your hardware.

3D rack elevations provide visibility into rack capacity and utilization to speed planning for future expansions.

Access real-time information on how your operations are performing by location.

Resolve issues and reduce unnecessary costs

When remote IT equipment goes down, sending someone to fix it wastes time and money. Brightlayer DIT software helps you resolve issues faster—and often stop them before they start.

Remotely control rackmount PDU outlets and rackmount UPS load segments—regardless of the vendor.

Reduce truck rolls and the need for on-site, non-IT staff to help troubleshoot equipment issues.

Gain 24/7 insight into equipment performance, so you can remotely diagnose and take corrective action when needed.

Access a user-defined home screen for immediate visibility into the data you need.

View key attributes of your entire UPS fleet, including alarm and battery status, load percentage, and remaining battery runtime.

Keep your sites cybersecure

Brightlayer DIT software keeps you a step ahead with powerful capabilities, such as remote firmware updates and configuration changes, and reporting features that drive fast, impactful decision making.

Remotely push firmware updates or configuration changes in bulk to your Eaton rackmount PDU and rackmount UPS network cards in minutes, keeping your organization safer from cybersecurity vulnerabilities while eliminating the need for in-person updates.

Use detailed reports, trend charts and dashboards to gain insights into power utilization, alarm frequency, power connections, 3D rack elevation visualizations and more.

1/4

Battery health report predicts remaining battery life so you can proactively replace them before they fail.

Avoid disaster with IT automations

Brightlayer DIT software helps protect your valuable IT equipment when the unexpected strikes—from power outages to equipment failures.

Automate device response and/or shutdown during critical power events or environmental stress conditions, like high temperature.

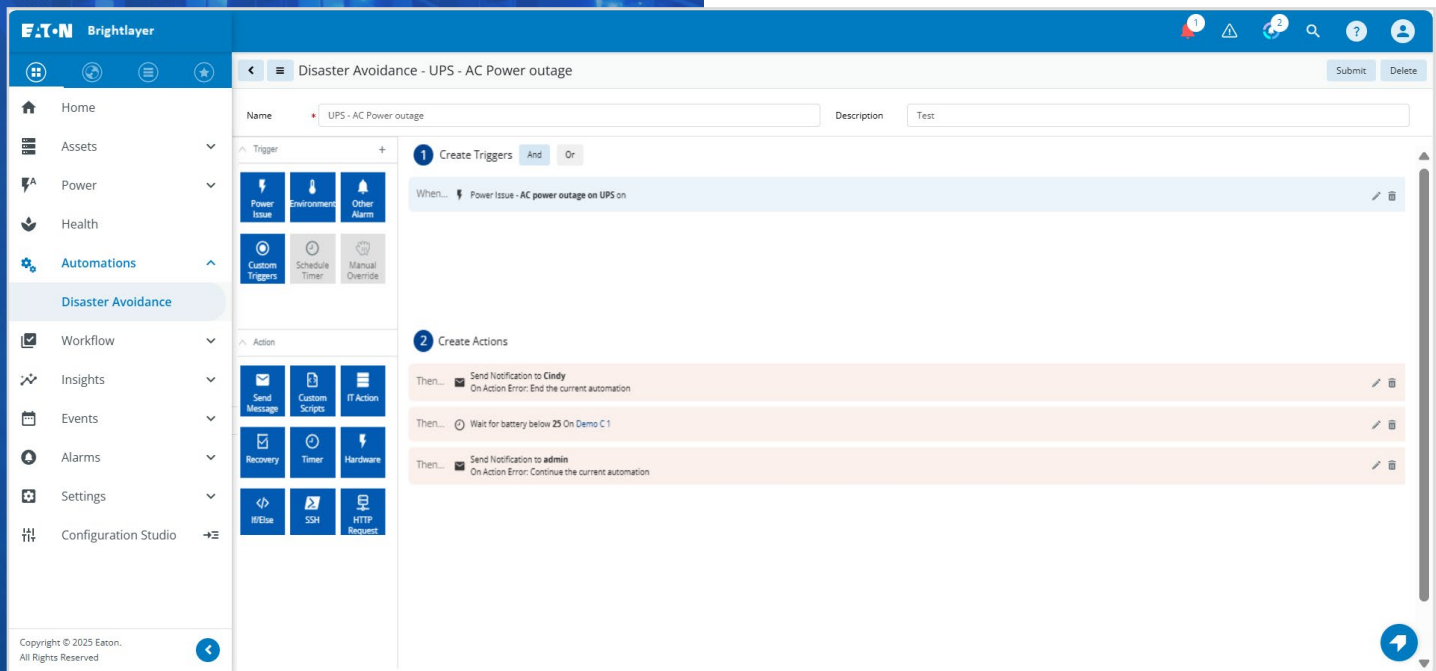

Quickly and centrally sequence automated responses—from simple to complex—across tens to thousands of devices.

Leverage tools to help you prevent equipment failures, such as the Eaton UPS and battery replacement reports, and email notifications when equipment is on the verge of failing.

Support physical and virtual assets from VMware, Nutanix and Microsoft HyperV.

Centrally sequence automated device response and/or shutdown for critical power events—from simple to complex—across tens to thousands of sites.

Monitoring software for locations with less than 50 devices

If your distributed IT infrastructure includes 50 devices or less, you may not need the robust capabilities of our Brightlayer DIT software. But you still need to keep track of assets, troubleshoot issues and avoid costly outages. Fortunately, we offer a right-sized solution for you.

Our Brightlayer DIT-Lite software delivers everything you need to monitor, manage and control your rack UPS and rack PDU devices, regardless of vendor or location. You also have access to the same alarms and notifications, dashboards and reporting features available in Brightlayer DIT software.
